

**OUTLINE FOR DISSEMINATING MODELING RESULTS TO WORKGROUPS,
PLENARY, AND STAKEHOLDERS
August 29, 2003**

1. POSTER SESSION: Each workshop would provide time up front to review posters that have been prepared for each scenario that has been modeled. The poster would include:
 - a. Scenario description
 - b. Targeted operational objective
 - c. Model(s) used
 - d. Summary of results
2. GROUP SESSION: A general discussion would follow the poster session. The purpose would be to present summary information and modeling results for each of the scenarios that were run. While there may be interest in getting into the details, this session would focus on the “30,000 foot” presentation. Detailed information would be discussed during the breakout sessions.
3. BREAKOUT SESSION: The breakout session would provide an opportunity for each interest group to look into the results and discuss issues related to their own interests. For the breakout session to be productive, several things would have to occur:
 - a. Tools would have to be available to each group to delve into the detailed information on the fly. The tools would help develop useful information from the model results. This means that enough information must be generated before hand to help explain in part the modeling results, or the modeling results must be fairly self-explanatory.
 - b. Experts will need to participate in the subgroup discussions. Team members would provide input as needed to each of the subgroup discussions. This may require that some team members move from subgroup to subgroup as the need arises since some questions may be about modeling specifics while others may be about operations.
 - c. Each subgroup will need a computer with a projector or “large” computer display for discussion.
 - d. Provide an effective means to facilitate discussion within each subgroup.
4. GROUP DISCUSSION: Finally, the subgroups would come together to report on their findings and recommendations. This would also be the session for addressing questions that were not answered during the breakout session.
